

Would you like to take part in research about social skills in ADHD?

What is this study? What does it involve?

We are looking for parents of children with **primary* ADHD** to help us understand the nature of social difficulties experienced by some children with ADHD. This research may help us develop more effective interventions for children with ADHD to improve long term social and academic outcomes.

Parents will be asked to complete a series of online questionnaires about their child's social, cognitive, and academic skills. The questionnaires take approximately 1.5-2 hours in total to complete and can be completed from your own home. You will also be asked to nominate a school teacher who can complete questionnaires about your child (approx. 45 minutes). **All participants will go in the draw to win a \$100 Coles/Myer voucher for participating.**

Who can participate?

Parents of children aged between 6-12 years who have a primary* diagnosis of ADHD

* their main diagnosis is ADHD, rather than another condition such as an intellectual disability, brain injury or other neurological or developmental condition

This research has been approved by the Macquarie University Ethics Committee. **HREC Reference No:** 52020666621710

Who is running this study?

This study is led by Associate Professor Melanie Porter (Senior Clinical Neuropsychologist), Ashleigh Behrens (PhD candidate), and Tamara Ilic (Masters candidate) from the Psychology Department at Macquarie University
